## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4-12, 18, 19, and 21-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Merola et al.

As per claims 1, 2, 8, and 18, Merola et al. discloses a multi-stage compressor assembly/method comprising first and second compression mechanisms (10 and 14), wherein the first stage compressor is started a predetermined time period before the second stage compressor is started (see Abstract, lines 9-11; column 1, lines 62-66; etc.), and the compression mechanisms be in separate housings (Figure 1).

As per claims 4, 9, and 21, Merola et al. discloses a time relay controlling the delay (see for example column 1, lines 62-66).

As per claims 5, 10, and 22, Merola et al. discloses the time delay allowing the first motor to reach as stable operating state (i.e., to bring the first compressor up to speed – see for example column 5, lines 20-24).

As per claims 6, 11, and 23, Merola et al. discloses the time lapse being about 5 seconds (column 5, line 40).

Art Unit: 3744

As per claims 7, 12, and 19, the compressors 10 and 14 are common single speed compressors.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 3, 13-17, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Merola et al. in view of Parker

As per claims 3, 13-17, and 20, Merola et al. teaches all features of these claims (as discussed regarding similar claims above) except for compressors 10 and 14 being in a single housing. However, it is old and well-known in the art to provide dual compressors within a single housing. Parker for example teaches a dual compressor arrangement within a single housing (Figures 1-7). It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the single housing arrangement of Parker to the system of

Merola et al. for the general purposes of space efficiency and reduced cost (see for example Parker, column 1, lines 42-47).
